Hiring Team
Third Intelligence Co., Ltd.
AI R&D Division
Tokyo, Japan

Dear Hiring Team,

I am writing to express my strong interest in the **Research Engineer (Intern)** position in the AI R&D division at Third Intelligence. As an AI engineer pursuing an Integrated M.Tech in Artificial Intelligence (graduating May 2027) with hands-on experience in end-to-end AI system construction, distributed architectures, and low-latency inference systems, I am excited about contributing to Third Intelligence's mission of building ubiquitous AGI.

Why I am a strong fit:

End-to-End AI System Architecture: At Revenuxe (Bangalore), I designed complete AI system architectures – from foundational model integration and inference optimization to distributed deployment on AWS. I have direct experience constructing AI systems end-to-end, optimizing inference pipelines for low latency, and collaborating with research teams to ensure implementation feasibility.

Python, PyTorch & Distributed Systems: I have deep expertise in Python and PyTorch, building AI agents with distributed architectures at NgKore Foundation (5G core). My work includes designing fault-tolerant systems, implementing model serving pipelines, and optimizing for throughput and latency – directly relevant to distributed learning and inference system design.

Foundational Model Integration & Optimization: Through BharatGreen AI (NVIDIA NIM integration) and my work at Revenuxe (RAG pipelines, LLM-based systems), I have practical experience operating and optimizing foundational models, implementing batch inference, caching strategies, and async serving for production environments.

Global Collaboration & Technical Communication: I actively contribute to international open-source communities (NgKore Foundation, The Boring Education), conducting technical discussions in English with global maintainers. I have experience in cross-functional collaboration between research and engineering teams.

Third Intelligence's vision of ubiquitous AGI that grows independently according to the user deeply resonates with my passion for building intelligent, scalable AI systems. I am available for fully remote work and flexible on working hours. I would welcome the opportunity to contribute to designing and optimizing distributed training and inference systems at Third Intelligence.

Thank you for your consideration. I look forward to discussing how my experience can contribute to your AGI research and development efforts.

Sincerely,

Shreyas Gupta
