PROFESSIONAL SUMMARY

AI Research Engineer pursuing Integrated M.Tech in Artificial Intelligence (graduating May 2027). Hands-on experience building end-to-end AI systems, designing distributed architectures, deploying low-latency AI inference pipelines, and developing AI agents with Python and PyTorch. Proven track record in foundational model integration, AI system architecture design, and collaboration with research teams. Winner of Agentic AI Hackathon 2025 (NielsenIQ & TCS). Passionate about AGI research, distributed training systems, and scalable AI infrastructure.

EDUCATION

SRM Institute of Science and Technology

Chennai, India

Integrated M.Tech in Artificial Intelligence (CGPA: 8.29/10)

Aug 2022 – May 2027

- Coursework: Deep Learning, Neural Network Architectures, Distributed Computing, NLP, Computer Vision, Reinforcement Learning, AI Systems Design, High-Performance Computing

EXPERIENCE

AI/ML Engineer Intern

May 2026 – July 2026

Revenue

Bangalore, India

- Designed and built end-to-end AI system architecture including RAG pipelines, inference optimization, and multi-agent orchestration using Python, FastAPI, and LangChain across two AI products.
- Optimized AI inference systems for low-latency serving, implementing caching strategies and async request handling to reduce response time under concurrent load.
- Collaborated with AI research teams to ensure feasibility of implementation, translating research prototypes into production-grade distributed systems.
- Migrated AI inference backends to AWS (EC2, Lambda, S3) and Dockerized model deployments, building highly available and scalable serving infrastructure.

Cybersecurity Research Intern

Dec 2025 – March 2026

Indian Institute of Technology, Guwahati

Guwahati, India

- Designed modular system architecture with CLI, parser, validator, loader, queries, and UI modules for AI-powered vulnerability analysis platform.
- Implemented custom LadyBugDB embedded graph database with optimized traversal algorithms, handling large-scale function call graphs and control flow edges efficiently.
- Built end-to-end AI pipeline from data ingestion to inference, demonstrating full-stack AI system construction and operation experience.

Open Source Contributor

June 2024 – July 2026

The Boring Education

Remote

- Built Python AI agent features with distributed architecture patterns; PRs merged after code review.
- Contributed to production Next.js/TypeScript platform via GitHub PRs in English-language global community.

Open Source Contributor (AI Engineer)

April 2023 – Present

NgKore Foundation

Remote

- Built autonomous Python AI agents with PyTorch-based reasoning for automated monitoring, anomaly detection, and configuration management in distributed 5G network systems.
- Designed distributed agent architectures with fault tolerance and self-correction capabilities for high-availability deployments; technical discussions conducted in English with global maintainers.

Business Strategy Intern

May 2024 – July 2024

To-Let Globe

Remote

- Built data processing pipelines using Python and SQL to analyze 10,000+ listings; designed Power BI dashboards for real-time analytics.

RESEARCH PROJECTS

BharatGreen AI <i>Python, FastAPI, Next.js, TypeScript, NVIDIA NIM</i>	Jan 2026 – March 2026
- Designed AI system architecture integrating foundational model inference (NVIDIA NIM) with distributed data pipelines for energy forecasting and carbon optimization. - Implemented low-latency inference serving with model optimization, batch processing, and async request handling for real-time AI predictions. - Developed scalable multimodal data pipeline handling temporal, geospatial, and text inputs with PyTorch-based model components.	
Light Pollution Sentinel <i>Python, Next.js, PostgreSQL, OpenAI, Docker</i>	July 2025 – Sept 2025
- Built end-to-end AI system from satellite data ingestion to model inference and alerting across 742 districts, demonstrating full AI system construction and operation. - Designed highly available system architecture with automated failover, health monitoring, and containerized deployment using Docker. - Optimized inference pipeline for throughput and latency, processing large-scale NASA satellite datasets efficiently.	

AWARDS & ACHIEVEMENTS

Winner – Agentic AI Hackathon 2025 (Certificate) <i>NielsenIQ & Tata Consultancy Services (TCS) – ALPS (Live)</i>	Sep 2025 Chennai, India
Member – Indian Society for Technical Education (ISTE) (Certificate) <i>SRM Institute of Science and Technology (SM No. 2258)</i>	Mar 2025 – Present Chennai, India

TECHNICAL SKILLS

Core Languages: Python, C/C++, Java, SQL (PostgreSQL), JavaScript, TypeScript
AI/ML Frameworks: PyTorch, TensorFlow, LangChain, Hugging Face Transformers, OpenAI API, NVIDIA NIM, scikit-learn, NLTK
Distributed Systems: Distributed training frameworks, model parallelism, data parallelism, async inference serving, low-latency optimization
Infrastructure & DevOps: AWS (EC2, Lambda, S3), Docker, Linux, Git, GitHub, CI/CD, containerized deployments
System Architecture: Low-latency inference systems, high-availability design, microservices, REST APIs, FastAPI, Flask, Next.js
Research Tools: Jupyter Notebook, LaTeX, Weights & Biases, CUDA (basic), VS Code

CERTIFICATIONS

TATA GenAI Powered Data Analytics Job Simulation , Forage (Certificate)	Oct '25
Deloitte Technology Job Simulation , Forage (Certificate)	Jun '25
Natural Language Processing , NPTEL (Certificate)	Apr '25
Competitive Programming (Certificate of Excellence) , Coding Ninjas (Certificate)	Jun '24
Programming in Java , NPTEL (Certificate)	Oct '23
